Helping teachers continuously strengthen their classroom practice through AI-supported feedback

84
teachers
participated

233
lessons
recorded

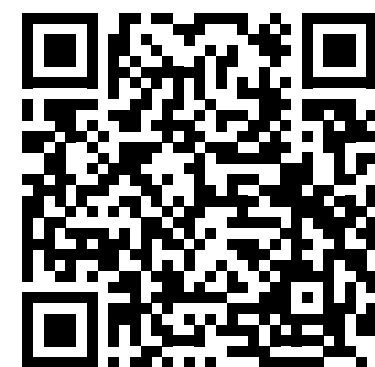

99
hours
of teaching
analysed by AI

We explored how AI can support teachers to reflect on and strengthen their classroom practice. Using AI-supported video tools, teachers recorded lessons, reviewed their teaching, and received targeted feedback aligned to their professional goals.

Teachers gained deeper insights into areas such as communication, classroom presence, and pace, helping them make small adjustments that can have a big impact on student engagement and learning.

At Nord Anglia, we believe great teaching never stands still and when teachers grow, students thrive.
