

Our

innovation

is immersive

Bringing learning to life through immersive experiences

2 in 3

teachers

reported **greater student curiosity and engagement** during VR learning

47%

of students

reported **high interest in the subject** after using VR

55%

of students

enjoyed VR-based learning **more than** traditional lessons

We explored how virtual reality can make learning more engaging and meaningful. Students used VR to experience environments and concepts that would otherwise be difficult to access, from science simulations to real-world industry settings.

By making learning more interactive and experiential, students became more curious and more engaged in their lesson content.

At Nord Anglia, we believe learning becomes more powerful when students can actively experience it for themselves.
