

DIGITAL HABITAT CHALLENGE 2024

MEL BICAN - BEES

A Global Campus Activity

February 2024

Mel's Bees

Name: Melichar Bican

Age: 11

I made the habitat
on the basis of my
research.

- For my research I chose the bees.
- People are felling trees and cutting grass with flowers so the bees don't have enough food (nectar) and place where to make their home (bee nest).
- Bees are further endangered by different diseases and chemicals used by people for fertilization.
- Bees eat a lot of nectar and drink water. They need flowers (for nectar) and clean rivers and lakes (for water). Bees are friendly animals, their all day job is to make honey.
- We can help them by cutting less grass, using less chemicals and building new hives.

- Ways that humans can help this animal.

MY HABITAT

- I built my habitat far away from any civilization, so there are no people who would cut the grass and flowers, or fertilize the fields. There are also no other animals which could pass the diseases to the bees (only I live there).
- There is a lot of flowers and nectar which the bees can eat. There is also clean river from which they can drink water and use it for making their nests. Bees can make their nests in and on the trees.
- The research which I made confirmed my idea that the bees are vulnerable and endangered animals, so people must protect them.
- I created 3 tasks concerning bee's homes, their food and the honey.

Set own game mode to Survival Mode

MY EVALUATION

- I have learnt that bees are using water to build their nests and that bees have their own diseases.
- I have learnt how to work with PowerPoint and upload the Minecraft video.
- I enjoyed doing the whole challenge, especially creating the environment for bees and making the video, because I made it on PC so I had to install all the programmes, which was hard, but also fun.
- On the Earth is a lot of endangered animals and we must take care of them or we will lose many species.

THANK YOU
