The Digital Habitat of Grizzly Bears

Name: Victor Wang

Age: 7

Role: Team Lead

A SUMMARY OF YOUR RESEARCH

The endangered animal that I chose in this project is the grizzly bear. The underlying reason why grizzly bears are endangered is human beings have substantially encroached and destroyed their habitats. Grizzly bears are currently short of food and shelters, and therefore, have changed their lifestyles very recently. In this research, I decided to build shelters, construct defense systems, and provide food for grizzly bears.

INCLUDE A PICTURE OF YOUR DESIGN PLAN (IF YOU CREATED ONE)

YOUR BUILD

The digital habitat that I created for endangered grizzly bears mainly consist of the shelter, the defense system, and food. The shelter is essentially a house for grizzly bears to sleep and store food. The defense system is basically lava on the boundaries of the habitat. Last but not the least, the food for grizzly bears is their favourite salmon in a big pool.

YOUR EVALUATION

- What did you learn from being part of this project? **I have learned how to protect endangered animals.**
- In what ways did your final project differ from your initial idea/design plan? **The final project is more detail-oriented and thorough.**
- What did you enjoy or find challenging? **I enjoyed my creative ideas and found implementation challenging.**
- Would you make any changes to your habitat? **Yes, I believe there will still be many details to add on.**
- How did you work as a team? **I respected other people's opinions and seamlessly integrated them into the final design.**
- In what ways has this project changed your thinking about the lives of endangered animals? **There are many things for human beings to undertake in protecting endangered animals.**

THANK YOU
