

DIGITAL HABITAT CHALLENGE 2024

A Global Campus Activity

February 2024

HAINAN GIBBONS

Your Group's Name

Your Group's details

Name: Jordan Guevara

Age: 6

A little about you and the role you played in the creative process.

I made a design that included everything the gibbons needed to live a happy life, keep them out of harm's way, and provide them with tools to play and clean. My mother and I have studied the living environment of Hainan gibbons. I have been to Hainan and know what tropical rainforests look like. They are in urgent need of protection. I've made a list of the things that are most important to their ecology.

Name: Eden Zhang

Age: 6

A little about you and the role you played in the creative process.

I thought about how they need treatment when they're sick, so they need people who can help them, and they need medical resources. They also need adequate vitamins.

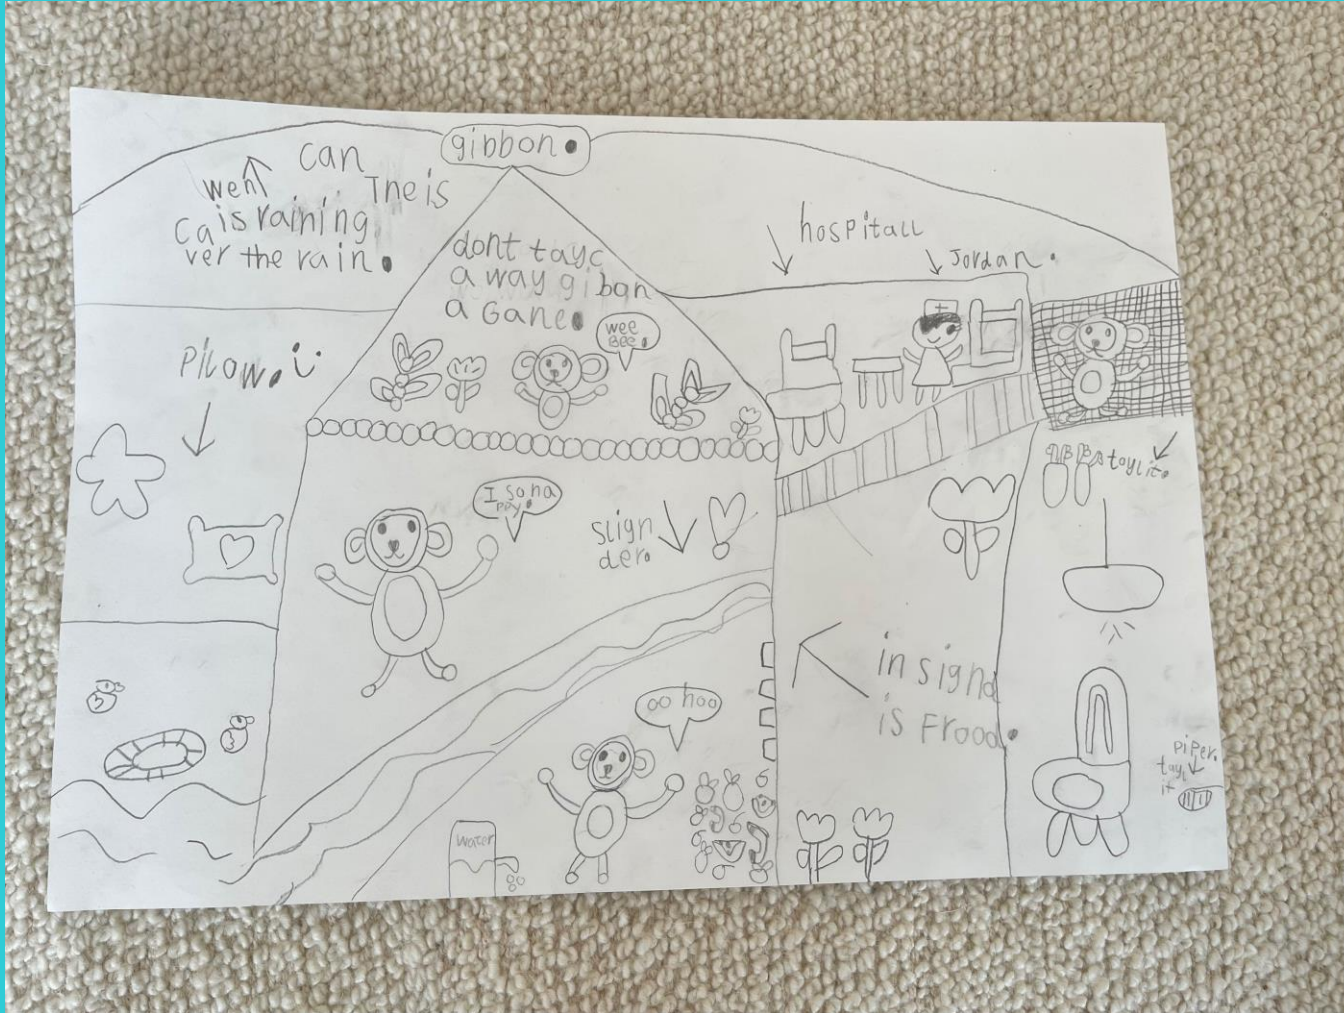

A SUMMARY OF YOUR RESEARCH

- Hainan gibbon, the world's rarest primate, has been listed as critically endangered by the International Union for Conservation of Nature. It was confirmed that the gibbon population has increased to 37 in five families in the Hainan island province.
- Numbering over 2,000 in the 1950s, the Hainan gibbons' population plunged to about seven in the 1980s, due to excessive hunting and lumbering which pushed them to the brink of extinction.
- Hainan gibbons typically live in rainforest trees over 10 meters tall. They have long arms and legs.
- Set up more nature reserves to protect the environment and forbid hunting.

INCLUDE A PICTURE OF YOUR DESIGN PLAN (IF YOU CREATED ONE)

YOUR BUILD

Write a few sentences about the habitat that you built for your endangered/vulnerable animal.

- Safe nature reserve, exclusive gibbon home, marked no hunting. Let people protect the environment. Perfect shelter and activity area and access to avoid harm.
- Perfect rainforest environment, the right temperature, clean water, plenty of wild fruit, especially lychee, which gibbons love. Balanced gibbon population.
- Think of yourself as one of them, and build for their needs based on the current situation and difficulties you find.
- Suitable for gibbons to climb high trees, plenty of trees, rainforest climate, fruit. Gibbons love to sing so that the number of gibbons is within reasonable limits.

YOUR EVALUATION

Some questions you could answer are:

- We should no longer destroy the environment. We can protect the animals that are going extinct.
- The program Settings of the game was interfered with the design, and can't be fully implemented according to my design, there will always be more I do not need, such as too many trees will have zombies.
- Draw the design on paper.
- I hope to do more architectural design.
- Imagine my ideas first, and then add ideas to each other with friends.
- I just learned that many animals are actually on the verge of extinction, and we should do something for them.

THANK YOU
